Some Universals of Grammar with
Particular Reference to the Order of
Meaningful Elements

Universal 1

In declarative sentences with nominal subject and object, the dominant order is almost always one in which the subject precedes the object.

[WALS map](#)

Universal 2

In languages with prepositions, the genitive almost always follows the governing noun, while in languages with postpositions it almost always precedes it.

[WALS map](#)

Universal 3

Languages with dominant VSO order are always prepositional.

WALS map

Universal 4

With overwhelmingly greater than chance frequency, languages with normal SOV order are postpositional.

WALS map

Universal 5

If a language has dominant SOV order and the genitive follows the governing noun, then the adjective likewise follows the noun.

Universal 6

All languages with dominant VSO order have SVO as an alternative or as the only alternative basic order.

Universal 7

If in a language with dominant SOV order, there is no alternative basic order, or only OSV as the alternative, then all adverbial modifiers of the verb likewise precede the verb. (This is the rigid subtype of III.)

Universal 8

When a yes-no question is differentiated from the corresponding assertion by an intonational pattern, the distinctive intonational features of each of these patterns are reckoned from the end of the sentence rather than from the beginning.

Universal 9

With well more than chance frequency, when question particles or affixes are specified in position by reference to the sentence as a whole, if initial, such elements are found in prepositional languages, and, if final, in postpositional.

[WALS map](#)

Universal 10

Question particles or affixes, when specified in position by reference to a particular word in the sentence, almost always follow that word. Such particles do not occur in languages with dominant order VSO.

Universal 11

Inversion of statement order so that verb precedes subject occurs only in languages where the question word or phrase is normally initial. This same inversion occurs in yes-no questions only if it also occurs in interrogative word questions.

Universal 12

If a language has dominant order VSO in declarative sentences, it always puts interrogative words or phrases first in interrogative word questions; if it has dominant order SOV in declarative sentences, there is never such an invariant rule.

[WALS map](#)

Universal 13

If the nominal object always precedes the verb, then verb forms subordinate to the main verb also precede it.

Universal 14

In conditional statements, the conditional clause precedes the conclusion as the normal order in all languages.

Universal 15

In expressions of volition and purpose, a subordinate verbal form always follows the main verb as the normal order except in those languages in which the nominal object always precedes the verb.

Universal 16

In languages with dominant order VSO, an inflected auxiliary always precedes the main verb. In languages with dominant order SOV, an inflected auxiliary always follows the main verb.

Universal 17

With overwhelmingly more than chance frequency, languages with dominant order VSO have the adjective after the noun.

[WALS map](#)

Universal 18

When the descriptive adjective precedes the noun, the demonstrative and the numeral, with overwhelmingly more than chance frequency, do likewise.

[WALS map](#)

Universal 19

When the general rule is that the descriptive adjective follows, there may be a minority of adjectives which usually precede, but when the general rule is that descriptive adjectives precede, there are no exceptions.

Universal 20

When any or all of the items (demonstrative, numeral, and descriptive adjective) precede the noun, they are always found in that order. If they follow, the order is either the same or its exact opposite.

Universal 21

If some or all adverbs follow the adjective they modify, then the language is one in which the qualifying adjective follows the noun and the verb precedes its nominal object as the dominant order.

Universal 22

If in comparisons of superiority the only order, or one of the alternative orders, is standard-marker-adjective, then the language is postpositional. With overwhelmingly more than chance frequency if the only order is adjective-marker-standard, the language is prepositional.

Universal 23

If in apposition the proper noun usually precedes the common noun, then the language is one in which the governing noun follows its dependent genitive. With much better than chance frequency, if the common noun usually precedes the proper noun, the dependent genitive follows its governing noun.

Universal 24

If the relative expression precedes the noun either as the only construction or as an alternate construction, either the language is postpositional, or the adjective precedes the noun, or both.

Universal 25

If the pronominal object follows the verb, so does the nominal object.

French:

Le garçon a vu la jeune fille.

'The boy has seen the girl.'

Le garçon l'a vue.

'The boy has seen her.'

Universal 26

If a language has discontinuous affixes, it always has either prefixing or suffixing or both.

Universal 27

If a language is exclusively suffixing, it is postpositional; if it is exclusively prefixing, it is prepositional.

Universal 28

If both the derivation and inflection follow the root, or they both precede the root, the derivation is always between the root and the inflection.

Universal 29

If a language has inflection, it always has derivation.

Universal 30

If the verb has categories of person-number or if it has categories of gender, it always has tense-mode categories.

Universal 31

If either the subject or object noun agrees with the verb in gender, then the adjective always agrees with the noun in gender.

Universal 32

Whenever the verb agrees with a nominal subject or nominal object in gender, it also agrees in number.

Universal 33

When number agreement between the noun and verb is suspended and the rule is based on order, the case is always one in which the verb precedes and the verb is in the singular.

Universal 34

No language has a trial number unless it has a dual. No language has a dual unless it has a plural.

Universal 35

There is no language in which the plural does not have some nonzero allomorphs, whereas there are languages in which the singular is expressed only by zero. The dual and the trial are almost never expressed only by zero.

Universal 36

If a language has the category of gender, it always has the category of number.

Universal 37

A language never has more gender categories in nonsingular numbers than in the singular.

Universal 38

Where there is a case system, the only case which ever has only zero allomorphs is the one which includes among its meanings that of the subject of the intransitive verb.

Universal 39

Where morphemes of both number and case are present and both follow or both precede the noun base, the expression of number almost always comes between the noun base and the expression of case.

Universal 40

When the adjective follows the noun, the adjective expresses all the inflectional categories of the noun. In such cases the noun may lack overt expression of one or all of these categories.

Universal 41

If in a language the verb follows both the nominal subject and nominal object as the dominant order, the language almost always has a case system.

Universal 42

All languages have pronominal categories involving at least three persons and two numbers.

Universal 43

If a language has gender categories in the noun, it has gender categories in the pronoun.

Universal 44

If a language has gender distinctions in the first person, it always has gender distinctions in the second or third person, or in both.

Universal 45

If there are any gender distinctions in the plural of the pronoun, there are some gender distinctions in the singular also.
